

Return by Reference

- A function can return reference
- It should not return reference of its local variables
- It can return formal parameters if they are reference

```
int & fun(int &a)
{
    cout<<a;
    return a;
}
int main()
{
    int x=10;
    fun(x)=25;
    cout<<x;
}
```
