

Using ++ multiple times in an Expression

Multiple ++ should not be used on a same variable inside single expression. The result will be unpredictable. The result is dependent on compiler.

Example:

```
int i=5,j;
```

```
j=++i + i++ + i++; //here we cant say what the result unless we run the program
```

```
cout<<i++<<++i<<i++; //here we cant say what will be output unless we run the program.
```
