Loops

- Loops are iterative statements
- Block of statements are repeatedly executed as long as condition is true
- Condition given in loop must become false after some finite iterations otherwise its a infinite loop
- Values used in condition must update inside the body of finite loop
- Four types of loops
-
- pre-tested loop   while()
- post-tested loop   do..while()
- counter controlled loop   for()
- for each loop for Collections   for()
